

Experiment-03

Create a simple cloud software application for Car Booking Reservation System using any Cloud Service Provider to demonstrate SaaS.

The image displays two screenshots of a web application running on a Zoho Creator platform. The application is titled 'Car Booking' and is in a 'Development' environment. The first screenshot shows the 'Book a Cab' form, which includes fields for Name (First Name and Last Name), Employee ID, Email Id, Mobile Number (with a dropdown for country code and a text input for the number), and Gender (Male and Female radio buttons). The second screenshot shows the 'Payment Details' form, which includes a 'Cost' field and a 'Payment Details' dropdown menu. Both screenshots show the application's navigation menu on the left, with 'Book a Cab' and 'Payment Details' highlighted. The Zoho Creator interface includes a top bar with the application name, environment, and user information, and a bottom bar with the Zoho logo and user profile.
